

Test Summary Report

Sauce Demo E-Commerce App

Date: July 29, 2026

Tester: Taufik Sumara

Session Duration: 7:18 PM – 7:50 PM (32 min)

Environment: Chrome, <https://www.saucedemo.com>

- **Total test cases planned:** 44
- **Total test cases executed:** 44 (plus extended exploratory coverage across problem_user, visual_user, error_user, and performance_glitch_user)
- **Pass:** 33 **Fail:** 11 **Blocked:** 0 **Not Executed:** 0
- **Exploratory session completed:** Yes (~45 min, extended beyond original 30-min charter)

2. Defect Summary

Severity	Count	Open	Closed
Critical	0	0	0
High	3	3	0
Medium	7	7	0
Low	1	1	0

3. Notable Defects

- **BUG-001** — First Name field accepts invalid input, no validation (Medium/Low)
- **BUG-002** — Last Name field accepts invalid input, no validation (Medium/Low)
- **BUG-003** — Zip/Postal Code field accepts invalid input, no validation (Medium/Low)
- **BUG-004** — Add to Cart fails entirely for problem_user (High/High)
- **BUG-005** — Product images mismatched under problem_user (High/High)
- **BUG-006** — Sort dropdown has no effect for problem_user (Medium/Medium)
- **BUG-007** — Cart contents persist across logout/login as a different user (High/High)
- **BUG-008** — Sauce Labs Backpack image swapped under visual_user (Medium/Medium)
- **BUG-009** — Navigation bar tilted / cart icon overlaps sort dropdown under visual_user (Medium/Low)
- **BUG-010** — Footer Terms of Service / Privacy Policy links not clickable (Low/Low)
- **BUG-011** — Checkout cannot be completed for error_user (High/High)

4. Exit Criteria Assessment

- ☒ All planned test cases executed
- ☐ No unresolved Critical/High defects — 3 High defects still open
- ☒ Exploratory session completed and logged

Exit criteria met? No.

Three High-severity defects remain open, each blocking a core flow (Add to Cart, Checkout, or cross-user session isolation). This build would not be release-ready until these are triaged and resolved.

5. Risk Assessment / Recommendation

Testing surfaced three High-severity defects that each independently block a core purchase flow: Add to Cart fails entirely under `problem_user`, checkout cannot be completed under `error_user`, and — most critically — cart contents persist across logout/login between different users, which is a session-isolation issue rather than a cosmetic one. In a production system, that last defect would be treated as a data integrity and privacy risk, since it implies one customer could see another customer's session data.

The remaining defects fall into two patterns: (1) non-standard accounts (`problem_user`, `visual_user`) exhibiting broken core interactions across unrelated features, suggesting a shared root cause tied to account/session state, and (2) a checkout form with no input validation on any text field, a systemic gap worth fixing holistically rather than field-by-field. Given the number and severity of blocking defects, I would not recommend this build for release without further triage, particularly on the cross-user cart persistence issue (BUG-007).

6. What I'd Test Next With More Time

- Confirm whether cart persistence (BUG-007) also occurs on a hard browser refresh, not just logout/login
- Retest "Reset App State" to isolate whether it's broken universally or only under `problem_user`
- Cross-browser check in Firefox (this session was Chrome-only)
- Confirm whether `visual_user`'s layout shift (BUG-009) blocks clickability or is purely cosmetic
